AFFORDABLE - SIMPLE - EFFICIENT

E-SolarPRO - Premium Solar Automation for Roller Shutters, Outdoor Blinds & Awnings

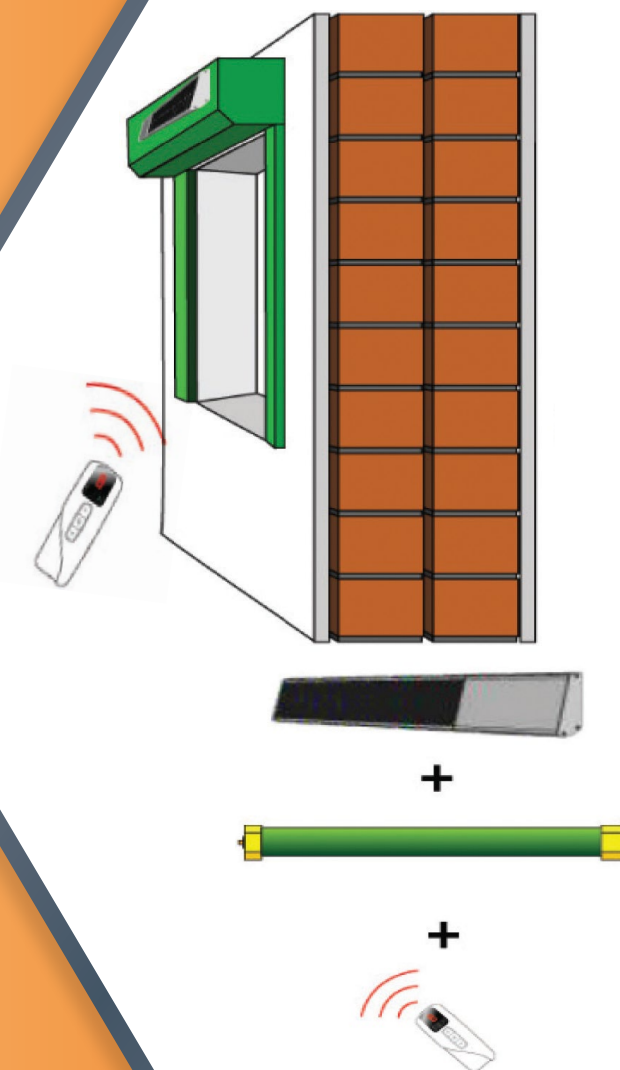

The E-SolarPRO consists of a sleek, preassembled module which collects energy from the sun through the solar panel and then storing the energy in high performance LiFePO4 batteries which are located in the command centre at opposite end of the module.

Operational using an Ozroll E-Trans Remote, the E-SolarPRO offers a standalone motorised system without a need for mains power.

The E-SolarPRO is designed to work in conjunction with other members from the E-Series range, including Ozroll's T-Series 12 Volt tubular motors and E-Trans handheld remotes.

The E-Solar Pro does not require any drilling on the inside of the application. Installation is as simple as fixing the shutter to the exterior of the application, then fixing the E-Solar module with Ozroll's own 'click & go' clips which make not only the installation easy but also any servicing.

The adaptable design allows use with a variety of application types.
